Date: Wednesday April 24, 2013
Time: Noon -1 p.m.
Place: St. Luke’s Rehabilitation Institute
711 S. Cowley
Spokane, WA
Room 200

Presentation:
A case study of a patient with Bilateral Pontine Stroke or “Locked in Syndrome”. This patient moved through multiple levels of care during his rehabilitation including acute care, transitional acute care, skilled nursing facility, acute rehabilitation and outpatient rehabilitation. The treating team of physiatrists and therapists from various levels of care will present a panel discussion of this interesting case.

Learning objectives would include:
• Understand the clinical implications of Bilateral Pontine Stroke
• Compare the different levels of care in rehab and understand the roles of each

Available over the Northwest TeleHealth network
