

## Patients Served

At St. Luke's we treat patients with both traumatic and acquired brain injuries who present with challenges including, but not limited to cognition, behavior, activities of daily living, mobility, community integration and leisure, communication, and swallowing.

A brain injury can happen to anyone at any age.

**60** years old  
average patient age

**260** patients with a brain injury were provided inpatient rehabilitation services

**12.4** days average length of stay

### Brain program patient ages:

Age	Number of Patients
0-17	5 (2%)
18-40	48 (18%)
41-65	84 (32%)
66-85	107 (41%)
86+	16 (6%)

### 90 days after discharge:

**90.8%** live in community

**.5%** in acute care

**8.7%** long-term care

## Support Group

**St. Luke's Brain Injury Support Group**  
3-4 p.m.  
Fourth Tuesday of each month

**Spokane TBI Survivor Support Group**  
7-9 p.m.  
Second Wednesday of each month

In 2019, patients with brain injury had an average of 3.5 hours of therapy a day while taking part in inpatient rehabilitation. This includes physical, occupational, and speech therapy, as well as recreation therapy, vocational rehabilitation, and rehabilitation psychology. Patients here also have an assigned physician, respiratory therapy and dietitian if needed, and access to a chaplain.

## Patient Satisfaction

Based on a national survey (MedTel outcomes), patients in an inpatient setting rated the following:

**94%**

patients were satisfied with St. Luke's

**36%**

of our patients had returned to work or school 90 days after discharging

**96%**

of our patients agreed that the rehabilitation program prepared them for going home

*St. Luke's understands TBI and what the patient is working through, and gives them respect and care that we were so thankful for.*

— Stacy Ritter, mother of former St. Luke's patient, Sidney, who suffered a traumatic brain injury
