Patients Served
At St. Luke’s we treat patients with both traumatic and acquired brain injuries who present with challenges including, but not limited to cognition, behavior, activities of daily living, mobility, community integration and leisure, communication, and swallowing.
A brain injury can happen to anyone at any age.

90 days after discharge:
91.4% live in community
1% in acute care
7.4% long-term care

Support Group
St. Luke’s Brain Injury Support Group
3-4 p.m.
Fourth Tuesday of each month
Spokane TBI Survivor Support Group
7-9 p.m.
Second Wednesday of each month

In 2018, patients with brain injury had an average of 3.3 hours of therapy a day while taking part in inpatient rehabilitation. This includes physical, occupational, and speech therapy, as well as recreation therapy, vocational rehabilitation, and rehabilitation psychology. Patients here also have an assigned physician, respiratory therapy and dietitian if needed, and access to a chaplain.
